a new indication for a proved product

Clinical experience has shown that treatment of acute ulcerative gingivitis with 'Flagyl' in a dose of three 200 mg tablets daily after food for three days results in rapid relief of symptoms without the risks attendant on other forms of treatment.

* 'Flagyl' resolves the acute phase very rapidly.
* 'Flagyl' is very well tolerated and does not elicit an allergic response.
* 'Flagyl' does not cause tissue damage.

*The rapid action of 'Flagyl' allows prompt surgical intervention to prevent recurrence.

Severe infection
Urgent action needed

Ceporin  cephloridine

When severe undiagnosed infection requires urgent treatment it is vital to use a safe, bactericidal, broad-spectrum antibiotic which is effective against penicillin-resistant staphylococci. Ceporin is such an antibiotic with the further advantage of safety in the penicillin-hypersensitive patient.

enzyme therapy for cardiovascular disorders

VASOLASTINE consists of enzymes which catalyse fat and cholesterol and those amines which take part in regulating the blood pressure.

The effect of Vasolastine is to resolve deposits of atheroma with consequent increasing oxygenation of the tissues.

Vasolastine is non-toxic and no side effects have been reported even with high dosages or prolonged treatment. There are no contra-indications.

the unknown quantity?

The ‘Iceberg’ of Disease—for every patient known to be suffering from a particular slowly progressive disease there are often several others who have vague symptoms or who are asymptomatic but show various abnormal signs. Surveillance for so much unknown or incipient morbidity is of prime importance, for with earlier detection there is often a much better chance of successful therapy or even prevention. Much can be achieved by the use of Hema-Combistix on every patient irrespective of the reason for consultation. In just over 30 seconds Hema-Combistix provides you with 4 valuable aids to diagnosis and can save time by eliminating repeat appointments.

DORBANEX

DUAL-ACTING

SOFTENS THE STOOL

THE CONSTIPATED BOWEL THEN GENTLY EVACUATES

PAIN-Caused by hard, dry stools can be a

distressing aspect of constipation. Discomfort leads to retention and, in turn, overloading of the rectum. But it is as with DORBANEX —

treatment is directed at softening the stool and

stimulating colonic peristalsis; the cycle of pain-retention-accumulation is broken.

Defaecation is comfortable; anxiety is allayed; and the bowel is helped back to normal function.

Because DORBANEX contains the laxative 1-α-dihydroxyanthraquinone, plus a new

softening agent, poloxamer, it both

softens and mobilises the stool. This dual action is invaluable in patients with anal

fissures or haemorrhoids, and in alleviating

elderly or cardiac patients.

Disadvantages of laxative treatment, such

as unpredictability, gripping, leakage, or

interference with bowel function, do not arise with DORBANEX. Especially

appreciated by patients old, young, or pregnant

(RIVER LABORATORIES, LOUTHBRUGH, ENGLAND)

( )
Try this test. Add Aldactone-A to conventional diuretic treatment and see for yourself how it can improve the patient's condition.

In addition, and most important, he felt well. He did not feel like the weak, washed-out patient that I have come to expect after intensive diuretic therapy.

Joe, A.D. (1960),
The Use of Aldosterone Antagonists in Cardiological Practice,
Paper presented before the Cardiac Society of Australia and New Zealand, October 1960.

Conventional diuretics act on the proximal renal tubule. They allow reabsorption of sodium and water and loss of potassium to continue at the distal tubule. But Aldactone-A (brand of spironolactone), added to the regimen, acts at the distal tubule, and prevents excessive sodium reabsorption and potassium loss.

Aldactone-A thus...
- Enhances sodium excretion
- Conserves potassium
- Overcomes diuretic resistance
- Improves diuresis
- Leaves patients feeling well

Aldactone-A is a registered trade mark.

Searle
ten days backlog...it could have been less with

Norgesic

In timewasting painful muscular conditions Norgesic can quickly get the patient on the move again. Its muscle relaxant-analgesic action rapidly relieves both the pain resulting from local tissue damage and the pain and stiffness associated with skeletal muscle spasm. In acute and chronic muscular conditions, and in tension headache, influenza aches and pains, and dysmenorrhoea, Norgesic overcomes the limitations of simple analgesics. Norgesic speeds recovery—and spares the patient wasted days of pain.

Basic NHS prices:
100 tablets £4.8; 500 tablets £11.4

*a more normal life for the hypertensive patient*

Supplied as 250 mg tablets and, for emergency use, as an injection. Detailed information is available to physicians on request.

Merck Sharp & Dohme Ltd, Hoddesdon, Hertfordshire
WHENEVER THE BENEFITS OF MORPHINE ARE NEEDED—

'CYCLIMORPH'
(Morphine plus Cyclizine) brand INJECTION

'Cyclimorph' provides all the benefits of morphine but overcomes the distressing, even dangerous vomiting often caused by this analgesic.

'Cyclimorph' is indicated whenever morphine is indicated—especially where nausea and vomiting would be harmful as in myocardial infarction
pre-operative medication
post-operative pain
debilitated patients

Cyclizine, the anti-nauseant and anti-emetic in 'Cyclimorph', is one of the most successful agents for the control of morphine-induced vomiting. It acts rapidly, has a similar duration of action to morphine, and is remarkably safe.

'Cyclimorph' is subject to the D.D. regulations. It is issued in 1 ml. ampoules (boxes of 5 and 25), in two strengths, viz.:

'CYCLIMORPH' 10
Morphine tartrate 10 mg. (gr. ½)
Cyclizine tartrate 50 mg. per ml.

'CYCLIMORPH' 15
Morphine tartrate 15 mg. (gr. ¼)
Cyclizine tartrate 50 mg. per ml.

BURROUGHS WELLCOME & CO.
(The Wellcome Foundation Ltd.)
LONDON
MIGRAINE?

At the first sign of migraine new ERGODRYL* is indicated. Ergodryl—a combination of ergotamine tartrate, caffeine citrate and Benadryl*—exerts a four-fold action in the symptomatic relief of migraine and Horton’s syndrome (histamine headache). Ergotamine, potentiated by caffeine, constricts the cranial blood vessels, causing a reduction in cerebral blood flow. Benadryl counteracts any tendency to nausea and vomiting, exerts a potent antihistaminic effect and sedates the patient. Ergodryl is available in containers of 10 and 100 capsules.

Carbrital* gives your patient so much more than just a good night's sleep. Some preparations can provide all the sleep needed, yet patients wake feeling depressed and lethargic. Carbrital contains a quick-acting barbiturate combined with a gentle-acting sedative. Sleep patterns therefore follow a smoother and more natural curve; your patient wakes feeling not just rested but refreshed.

Carbrital is available in Kapseals* each containing 1 1/2 grains pentobarbitone sodium and 4 grains carbromal. In bottles of 25 & 250. Also as an Elixir (1/2 grain pentobarbitone sodium and 3/4 grain carbromal per teaspoonful) in bottles of 4, 16 and 80 fl. oz.

BETTER MEDICINES
FOR A BETTER WORLD
"don’t worry"

Such simple reassurance is often tendered to the chronic sick, but the doctor knows that patients do worry about chronic illness and its uncertainties, about the possibility of protracted invalidism. This preoccupation can lead to frank depression, and the depression requires treatment. ‘Tryptizol’ has been shown to be valuable in all forms of depression. In addition, it has an intrinsic tranquillising effect on the anxiety and tension so often associated with depression.

IN MENTAL CONFUSION
LUCIDRIL TURNS DISCORD TO HARMONY

Lucidril encourages the metabolism of glucose and oxygen by the nerve cells—actions which have proved of marked value in a wide range of confusional states. Profound and lasting increases in alertness and activity have been achieved. The virtual non-toxicity of the drug and the negligible incidence of side effects have been among the most striking features of extensive clinical trials over the past six years.

Lucidril (approved name B.P. meclofenoxate) is available as 300 mg. tablets in 30's and 100's; basic NHS prices 19/6 and 57/3. Adult dosage: 900-1200 mg. daily. Available in 100 mg. tablets for children and in vials for injection.

Edecrin

ETHACRYNIC ACID

'Edecrin' is chemically and pharmacologically distinct from all other diuretics in common use. It has multiple sites of action on the nephron—not only at the proximal and distal convoluted tubule, but more importantly, also at the ascending limb of the loop of Henle. This unique mode of action is reflected clinically in the effectiveness of 'Edecrin' in many patients resistant to all other diuretics.

'Edecrin' has a wider range of effectiveness than the thiazides and related diuretics. It may be used in oedema of all grades of severity, whether acute or chronic. 'Edecrin' has an extremely rapid onset of action (four times faster than parenteral mercurials) and produces a more favourable ratio of sodium to potassium excretion than the thiazides.

extending the reach of diuretic therapy

THE INTERNATIONAL STANDARD OF ELECTRIC CURRENT...

... is the ampere. This is defined as "that constant current which, if maintained in two parallel rectilinear conductors of infinite length, of negligible circular cross-section, and placed at a distance of one metre apart in a vacuum, would produce between these conductors a force equal to 2 x 10^-7 newton per metre length."

André Marie Ampère was born at Polémieux, near Lyons, on January 22nd, 1775 and died at Marseilles on June 10th, 1836

TRANSVASIN is the standard therapy... for the relief of rheumatic symptoms

Patients suffering from rheumatic lesions obtain rapid relief with Transvasin, the well-proven and economical therapy. The esters of nicotinic, salicylic and p-aminobenzoic acids penetrate the skin and are concentrated at the point of injury, producing superficial erythema and deep hyperaemia. Transvasin is a valuable adjuvant in the treatment of osteo- and rheumatoid-arthritis.
