

Long term illness is unpleasant.

Long term debt is unnecessary.

You have to face the fact that when you can't work your income soon drops.

But when illness or accident strikes you the bills still have to be paid.

Too often illness means long term debt. Which is unnecessary. For a small monthly sum you could ensure that when your income falls due to incapacity the Medical Sickness Society will start sending you a monthly cheque to replace it.

And the cheques will continue either until you're fit enough to return to work or until normal retirement age, whichever is earlier. And we can't cancel the policy because of long or frequent claims.

If you have not got around to ensuring that we take over your financial worries when incapacity stops you working write to us today quoting reference number 5014. You will be surprised how little this essential cover will cost.

Aserbine and your District Nurse

Cleaning up skin ulcers, bed-sores and the like is not the pleasantest of jobs, but it is the constant task of the District Nurse. And even the most experienced nurse may need your guidance when slough is the main reason for delay in healing. When this is the case, Aserbine Cream and Solution will often be the best answer.

If she is technically minded, it can be explained that both Aserbine Cream and Aserbine Solution maintain a pH of 2.4 at the tissue surface. This pH is ideal for the differential hydration of protein and cleavage between dead and living tissue results.

If she is more interested in the practicalities, she'll appreciate that Aserbine Cream for dressings with Aserbine Solution for washing between dressings is a remarkably effective way of removing slough.

Aserbine's unique action in cleaning-up slough can make even the unpleasant jobs rewarding.

Aserbine* is available in jars containing 100 G. cream and in polythene bottles containing 500 ml. solution. Aserbine Cream is prepared from malic acid, 0.36%; benzoic acid, 0.024%; salicylic acid, 0.006%; propylene glycol, 1.7%. Aserbine Solution is prepared from malic acid, 2.25%; benzoic acid, 0.15%; salicylic acid, 0.0375%; propylene glycol, 40.00%.

Full information is available on request.

in bronchitis more effective than ampicillin or tetracycline

Compared with ampicillin

In a controlled single-blind trial involving 50 patients with chronic bronchitis SEPTRIN* was shown to be more effective than ampicillin, with reference to reduction of sputum volume and purulence.

Sputum volume reduction

There was a significantly greater reduction in mean sputum volume after treatment with SEPTRIN than after treatment with ampicillin.

Sputum purulence reduction

23 out of 24 cases with purulent sputum receiving SEPTRIN improved as compared with 16 out of 22 cases with purulent sputum receiving ampicillin. (Sputum was graded according to MRC criteria). The success rate for SEPTRIN was significantly higher than for ampicillin.

Clinical improvement

Clinically, 24 out of 25 cases receiving SEPTRIN responded as compared with 19 out of 25 receiving ampicillin.

Reference:

Postgrad med J. (1969) 45, Supplement (November) 86.

*Trade Mark

Compared with tetracycline

In a trial designed to compare the effect of SEPTRIN with that of tetracycline in the treatment of chronic bronchitis, it was found that a week's course with SEPTRIN was more beneficial than a week's course of tetracycline.

24 patients received SEPTRIN and 22 received tetracycline. Objective data was collected from the two groups at the beginning and at the end of treatment.

Sputum Volume

The decrease in mean sputum volume after treatment, as a fraction of the initial measurements, was significantly larger for the SEPTRIN group.

Sputum purulence

Objective grading of reduction in purulence of the sputum showed better results with SEPTRIN than with tetracycline at the end of treatment.

Reference:

Postgrad med J. (1969) 45, Supplement (November) 91.

SEPTRIN Tablets, SEPTRIN Paediatric Suspension and SEPTRIN Paediatric Tablets contain trimethoprim and sulphamethoxazole.

for bacterial infections
Septtrin
an advance on the antibiotics

Emergencies from ventricular arrhythmias call for priority treatment—fast. Xylocard 2% is specifically designed to meet such emergencies. Ready for instant use in a disposable syringe, Xylocard 2% provides a bolus I.V. injection for treatment in ventricular arrhythmias associated with myocardial infarction, cardiac surgery and certain diagnostic procedures.

To prolong the therapeutic effect of the Xylocard 2% bolus injection, an infusion of Xylocard 10% should be given in hospital.

XYLOCARD 2%

Bolus injection for immediate use for hospital and general practice.

Each syringe contains Xylocaine 2%. Each ml contains 20 mg Xylocaine, and 6 mg Sodium chloride B.P. Packs: 5 x 5 ml disposable syringes in sterile safety pack.

XYLOCARD 10%

for infusion for hospital use only.

Each syringe contains Xylocaine 10%. Each ml contains 100 mg Xylocaine in 1 ml of water for injection B.P.

Packs: 10 x 5 ml disposable syringes in sterile safety pack.

MUST NOT BE USED UNDILUTED.

Halt at the flashing light

Flashing lights and visual disturbances, classically early warnings of migraine, are signals for arresting all manifestations of an attack – at onset.

MIGRIL* acts in the minutes between initial warning and the otherwise inevitable full-blown attack.

As well as containing an effective dose of ergotamine (2mg in each tablet), enhanced by caffeine, MIGRIL contains the anti-emetic, cyclizine. Nausea and vomiting, due to migraine itself or to ergotamine, are very effectively relieved.

MIGRIL, taken at the first warning of an attack, provides a specific treatment that the patient will learn to rely on. Full information is available on request.

An outstanding year in British Medical History

1948 will be remembered as the year in which the National Health Service came into being.

It may also be remembered as the year in which Roter tablets first became available to the Medical Profession in the United Kingdom. In the intervening 21 years Roter has provided superlative service to those suffering from peptic ulcer and its sequelae, *and has not been superseded.*

The record is impressive. Hundreds of thousands of chronic cases, both of the duodenal and gastric varieties—resistant to conventional treatment—have been relieved of their pains and miseries and given a new lease of life. Equally good service has been rendered to post-operative relapse cases.

Roter is still the most effective and economical therapy available. N.H.S. basic cost of initial treatment is 5/-d. per week and maintenance—where needed—only 2/6d. per week or less.

Roter treatment is ambulant and produces no side effects.

If it is a gastric ulcer the proven way to heal it is with Biogastrone

As ten years' experience has shown, a few weeks' treatment with BIOGASTRONE will heal most gastric ulcers while the patient continues to work and enjoy a normal life. Ulcers that do not respond to

this treatment are unlikely to heal subsequently with bed-rest in hospital.

BIOGASTRONE therapy, convenient and economical, is a decisive treatment for the early ulcer.

A UNIQUE ORAL GEL WITH STRIKING ANALGESIC AND ANTISEPTIC PROPERTIES

Bonjela has been shown in formal American trials to bring rapid relief from pain in 90% of all cases of oral ulceration, herpes labialis, gingivitis and denture sores. By rapid relief is meant marked alleviation of pain within 2-3 minutes.

These results have now been confirmed by a controlled trial conducted recently by a British dental surgeon.* 89.3% of the patients receiving Bonjela experienced relief from pain which lasted in 59.5% of these patients for 3 hours or more. Among the conditions treated were recurrent

aphthae, denture trauma, herpetic lesions and soft tissue trauma.

*Marshall, K. F., "A topically applied salicylate gel." *Brit. Dent. J.*, 1969, 127, 139.

FORMULA: Choline Salicylate 8.7%, Cetalkonium Chloride 0.01%, Alc. (95%) 39.0%, Menthol 0.057%, Glycer. 4.6%.

INDICATIONS: Herpes labialis, gingivitis, oral ulcerations, cheilosis denture sores, infant teething disorders.

PRESENTATION: Bonjela is available in 10 g. tubes at a basic N.H.S. cost of 2/9d. per tube.

YOU'RE RIGHT TO CHOOSE NEGRAM (right from the start)

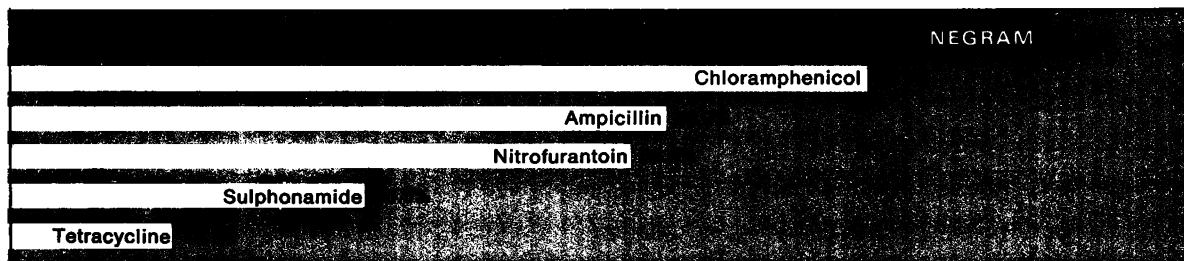

Since Negram was introduced, many investigators have compared its activity with that of other antibacterials. Studies of in vitro sensitivity of common urinary pathogens have consistently shown it to be more effective than any other agent in routine use.

So when you choose Negram as first line treatment for urinary tract infections, nine times out of ten you'll have made the right choice.

the chart and the weight gain entered on the graph. Alternately, the weight can be entered into the box under the graph.

Other indices: e.g. Presentation, position, foetal heart, urine and oedema are entered in separate boxes under the graph.

The spacing of the graph, unlike Dr Taylor's method of 5-week intervals, is along the lines of the normal antenatal visits. Extra visits can be squeezed in or the numbers altered. Any treatment given that is to be recorded is written in pen on the graph. The use of different colours would be helpful.

Conclusions

The advantage of such a chart is that any variations from the normal is more easily discernible. Although there are less home confinements carried out by general practitioners today, there is more antenatal care, with the patient being referred back to the hospital at the 32nd or 34th week. The chart may be sent to the hospital with the patient. It could be completed in hospital and a flimsy photocopy returned to the general practitioner for his records. The front and back of the form could be similar to the EC24 R/2 form, or perhaps these also could be revised. My charts may not be the most acceptable, and the squares are on the small size, but I do feel that charting the findings we obtain at antenatal examinations is a much more satisfactory way of recording results.
