

# in urinary infections 'clearly superior' to ampicillin or sulphadimidine

## Higher cure rates

These comparative results were obtained in treating hospital in-patients with UTI<sup>1</sup>, most of whom were infected with entrenched hospital pathogens.

|               |                |
|---------------|----------------|
| 85% cure rate | SEPTRIN*       |
| 70% cure rate | ampicillin     |
| 40% cure rate | sulphadimidine |

(Cure criterion = eradication of original organism 1 week after treatment ended.)

SEPTRIN was "clearly superior to either of the other treatments" and this superior effect was "even more appreciable in the re-treatment of patients who had failed on another drug."<sup>2</sup>

SEPTRIN Tablets, SEPTRIN Paediatric Suspension and SEPTRIN Paediatric Tablets contain trimethoprim and sulphamethoxazole.

## Clear reasons for using Septrin

Abstracted from a Leading Article in the *British Medical Journal*<sup>2</sup>

□ Trimethoprim not only attains therapeutic tissue levels, but is excreted unchanged in high concentration in the urine.

□ All Gram-negative bacilli occurring in the urine, except *Pseudomonas aeruginosa*, are usually highly sensitive to it.

□ Its minimum inhibitory concentration is extremely low.

□ Trimethoprim and a sulphonamide, by blocking successive stages in the same bacterial metabolic process, exert a strong synergic effect, and this action is bactericidal.

# When Anxiety is more than a bitten nail

## TRIPTAFEN-MINOR

Trade Mark

**calms the patient  
and regulates associated depression**

Bitten nails can be a sign that your patient is worried, nervous, depressed.  
His confidence is shattered and his life is a muddle. He seeks your advice.  
He needs the benefit of your understanding — and Triptafen-Minor to calm him.

Triptafen-Minor is ideal for patients with minor neuroses who need treatment — the sort you see so often. It might be the housewife who feels that she can no longer cope. It might be the executive whose job and home worries are too much. It could be a patient who has suffered a recent bereavement.

Whatever the cause, Triptafen-Minor will calm your patient and regulate any associated depression.

Each Triptafen-Minor tablet contains: Amitriptyline hydrochloride BP 10 mg, Perphenazine BP 2 mg.

# Halt at the flashing light

Flashing lights and visual disturbances, classically early warnings of migraine, are signals for arresting all manifestations of an attack—at onset.

MIGRIL\* acts in the minutes between initial warning and the otherwise inevitable full-blown attack.

As well as containing an effective dose of ergotamine (2mg in each tablet), enhanced by caffeine, MIGRIL contains the anti-emetic, cyclizine. Nausea and vomiting, due to migraine itself or to ergotamine, are very effectively relieved.

MIGRIL, taken at the first warning of an attack, provides a specific treatment that the patient will learn to rely on. Full information is available on request.

**Described for Practitioners and Students**

**Sir Francis Walshe, MD, DSc, FRCP (Lond.), FRS**

**1970 Eleventh Edition**

**416 pages 44 illus. 60s. Post 4s. 6d.**

## **Extract from preface**

The steady growth of knowledge since the publication of the tenth edition of this text, in some though not in all aspects of neurological medicine, has increased the difficulty of selection of material for a work designed for a specified circle of readers. This has made the danger of reducing the book to a pocket encyclopaedia, containing too little of too much, more difficult to avert.

Yet it still remains selective, dealing with uncommon diseases only when they exemplify new ways of looking at things that promise fruitful developments in clinical neurology and may close the wide gap in the effective control and treatment of the non-infective diseases of the nervous system that has hitherto been a characteristic of neurological medicine.

The division of the book into two parts: the first dealing with the fundamentals of neurological diagnosis, and the second with an account of the more common nervous disorders, is retained.

## **Opinions of previous editions**

"This book is now one of the classics of medicine. Clear, concise and authoritative, it bears the hallmark of the author's clinical acumen and wise knowledge of the speciality of which he is the outstanding representative at the present day."—*Practitioner*

"This book is so well known that it really needs no recommendation. The subtitle of the work is 'Described for Practitioners and Students', and the emphasis is rightly on the practical aspects of neurology.

"This book has been called one of the classics of medicine. It can be wholeheartedly recommended."—*Middlesex Hospital Journal*

GARRAD AND ROSENHEIM

### Social Aspects of Clinical Medicine

by Jessie Garrad, B.A., B.Sc., A.I.M.S.W., and Sir Max Rosenheim, K.B.E., M.A., M.D., D.Sc.

Medical students are keenly aware of the importance of this subject, and the study of it is now required in most medical schools. This book presents an examination of the environmental and emotional factors which may affect a patient's disease and the means by which community services can be enlisted in his aid.

A high-contrast, black and white photograph of a man sitting at a desk, looking directly at the camera. He is wearing a light-colored shirt and glasses. His hands are resting on a desk with papers and a glass. A clock is visible on the wall behind him to the right.

**Abstract**—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders among different types of workers. Data from the National Longitudinal Study of the Adolescent Health Survey (Add Health) were used to examine the prevalence of musculoskeletal disorders among three groups of workers: full-time employees, part-time employees, and self-employed individuals. The results showed that the prevalence of musculoskeletal disorders was highest among self-employed individuals, followed by full-time employees, and lowest among part-time employees. These findings suggest that self-employment may be associated with a higher risk of developing musculoskeletal disorders.

# YOU'RE RIGHT TO CHOOSE NEGRAM (right from the start)

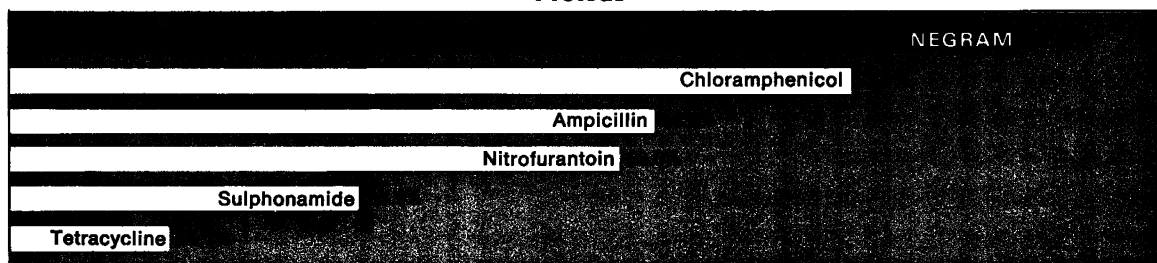

Since Negram was introduced, many investigators have compared its activity with that of other antibacterials. Studies of in vitro sensitivity of common urinary pathogens have consistently shown it to be more effective than any other agent in routine use.

So when you choose Negram as first line treatment for urinary tract infections, nine times out of ten you'll have made the right choice.

### CONFERENCE

#### "OUT OF HOSPITAL—WHO CARES?"

on Tuesday, September, 22nd, 1970.  
at Bedford College, London, N.W.1

*Chairman:* Dr A. S. Gatherer,  
Medical Officer of Health, County  
Borough of Reading.

General practitioners are invited to attend this conference for doctors, nurses and social workers concerned with the treatment and care of mentally ill and severely subnormal patients and their families.

Programmes and application forms from the National Association for Mental Health, Social Services Department, 39 Queen Anne Street, London, W1M 0AJ. (01-935 1217 ext. 22).

### THE EDUCATION FOUNDATION BOARD

This board holds funds for the furtherance of education in and for general practice, and is prepared to consider projects for personal or corporate education or educational research. They must not be such as would be covered by section 63 of the National Health Service Act, or any other similar provision.

Applications should set out the name of the applicant, the aims of the project, the methods to be employed, the estimated cost, the reasons why no other form of funding is likely to be available, and the anticipated commencing and finishing dates of the project. The board will require a typescript report of the results of the work undertaken.

Applications should be typed and sent to the Secretary, Education Foundation Board, The Royal College of General Practitioners, 14, Princes Gate, Hyde Park, London S.W. 7.
