No more wide-awake dawns with
REMNOS
First choice Nitrazepam for safer, natural sleep

Remnos is the DDSA trade mark for pharmaceutical preparations containing Nitrazepam BP 5mg. Further information is available on request from: DDSA Pharmaceuticals, 310 Old Brompton Road, London SW5 9JQ
FOCUS ON HYPERTENSION

with 'Moduretic'

* Highly effective control of thiazide-responsive hypertension.
* Helps conserve potassium; supplements are contra-indicated.
* Encourages patient compliance.

MODURETIC®
MULTI-PURPOSE DIURETIC

'Moduretic' is available as peach-coloured, diamond-shaped tablets containing 5mg amiloride hydrochloride and 5mg hydrochlorothiazide. Detailed information is available to physicians on request.

Merck Sharp & Dohme Limited
Hoddesdon, Hertfordshire, EN11 9BU
Normacol makes work for idle bowels

By increasing the bulk of the faecal mass Normacol brings about a natural stimulation of the peristaltic reflex. Normacol absorbs up to sixty times its own volume of water—this increase in bulk stimulates peristalsis and the bowels are allowed to function as they should.

Normacol Standard brown coated granules containing Sterculia BPC 62% and Frangula BPC 1949 8%.

Normacol Special white coated granules containing Sterculia BPC 62% alone.

Normacol Antispasmodic orange coated granules containing Sterculia BPC 62% and Alverine Citrate (dipropylene citrate) 0.5%.

Normacol Diabetic brown coated granules is identical with Normacol Standard except for the absence of sugar.

Further information and samples on request.

Nystan is a registered trade mark of nystatin produced by E. R. Squibb & Sons Ltd.
Update Postgraduate Centre Series

The Update Postgraduate Centre Series is a series of well illustrated booklets, each covering a single topic of importance to family medicine. The object of the series is to serve as 'back-up' to the work of the postgraduate centres. It is also meant to encourage discussion and individual study of diseases commonly encountered in general practice.

Copies of the following booklets are currently available: other titles are in preparation and will be announced in the journals when they are published.

- Chronic Bronchitis
- Hypertension
- Urinary Infections
- Upper Respiratory Tract Infection
- Diseases of Old Age
- Diseases of Women
- Anxiety and Depression
- Pain
- Asthma

Copies of the above booklets may be obtained from the publisher, price 60p each, plus 15p p&p per copy.

Broadsheets were prepared to accompany 4 of the booklets in this series and, although these have now been discontinued, a few copies are still available. They are:

- 'Pulmonary Function Tests in General Practice' (Asthma);
- 'Differential Diagnosis in Upper Respiratory Tract Infection' (Upper Respiratory Tract Infection);
- 'The Investigation of Hypertension' (Hypertension) and 'How to Read a Barium Meal' (Peptic Ulcer.)

The broadsheets are printed in two colours, measure 17" x 24½" and cost 50p each, plus 15p p&p per copy.

All orders must be accompanied by a cheque or Postal Order made payable to Update Publications Ltd. Please type or print your name and address clearly. Send your order to:

Update Publications Ltd., 33/34 Alfred Place, London WC1E 7DP
In a study of the sensitivities of acute urinary infection isolates to commonly-used oral antibacterials, 99.1% of the pathogens isolated were sensitive to Septrin.
Septrin* has a complete spectrum of activity against the organisms usually responsible for urinary tract infections. With its bactericidal action, speed of patient response and convenient dosage, Septrin has become the most widely-used antibacterial for treating urinary infections.

Septrin contains trimethoprim and sulphamethoxazole.
Full prescribing information is available on request.

(labetalol)

A UNIQUE PROFILE IN HYPERTENSION

CONCURRENT ALPHA- AND BETA-ADRENOCEPTOR BLOCKADE

THE USE OF TRANDATE IS BEING MONITORED IN THE UNITED KINGDOM
IN PRINCIPLE

In essential hypertension, the peripheral resistance is increased and the cardiac output normal. The most desirable way to lower blood pressure is, therefore, to decrease the peripheral resistance and not adversely affect cardiac function. Unfortunately, the available antihypertensive drugs which reduce peripheral resistance by impairing sympathetic nerve activity or by other means, cause side effects that are unpleasant to patients.

TRANDATE lowers the blood pressure primarily by blocking alpha-adrenoceptors in peripheral arterioles and thereby reducing the peripheral resistance. The drug differs from simple alpha-adrenoceptor blockers in that it concurrently blocks beta-adrenoceptors in the heart.

This beta-blockade protects the heart from the reflex sympathetic drive normally induced by peripheral vasodilatation and so the reduction in blood pressure is achieved without cardiac stimulation. Conversely increased reflex activity modulates the beta-blocking effect of the drug on the heart and the resting cardiac output is not significantly changed.

The resultant effects of TRANDATE are that the blood pressure is decreased, the cardiac output is maintained at rest and after moderate exercise, and the barostatic reflexes remain sufficiently active to avoid side effects associated with postural hypotension in most patients.

A further advantage of TRANDATE is that it does not cause the sedation or lethargy often associated with centrally-acting antihypertensive agents.

“...The major haemodynamic dysfunction in uncomplicated essential hypertension is an increased peripheral vascular resistance associated with unchanged cardiac output. The desirable treatment, therefore, is to use drug treatments aimed at reducing peripheral resistance. The ideal
Trandate, the first alpha- and beta-adrenoceptor blocker, was specifically developed to treat hypertension.

Trandate Tablets (100mg and 200mg) are indicated in all grades of hypertension when oral antihypertensive therapy is desirable.

Trandate Injection is for intravenous use in hospitalised patients when rapid reduction of blood pressure is essential.

Trandate offers important advantages in practice

- High efficacy across the whole spectrum of hypertension
  From the recently diagnosed mild hypertensive to drug-resistant cases including patients in hypertensive crisis.

- Low incidence of dose-limiting side effects
  The side effects usually associated with antihypertensive therapy are greatly reduced or absent.

- Minimum physiological disturbance
  Cardiac output is maintained and renal function is not adversely affected.

- Single drug therapy
  Hypertension is usually controlled with Trandate alone and complicated regimens involving other antihypertensives are unnecessary.

The use of Trandate Tablets in the United Kingdom is being monitored.

Full prescribing information and details of the procedure involved in monitoring patients on Trandate are available on request.
Piriton
is the first choice Antihistamine

IN HAY FEVER
INSECT BITES AND STINGS
FOOD ALLERGIES · URTICARIA
ALLERGIC DERMATOLOGICAL DISORDERS

Piriton is available in a wide range of preparations to suit each individual patient and each individual need:—
Piriton Tablets for routine therapy
Piriton Spandets for sustained action
Piriton Syrup for paediatric use
Piriton Injection for emergencies
All Piriton preparations contain chlorpheniramine maleate BP.

Faster recovery in Bronchitis.

In ambulant patients with purulent sputum and dyspnoea, 5 days' therapy with Amoxil proved significantly more effective than oxytetracycline in all symptoms assessed!

Simple trouble free dosage.

Low incidence of side effects.

Amoxil makes all the difference everywhere.
IN ASTHMA AND CHRONIC BRONCHITIS

Ventolin is the most extensively prescribed bronchodilator

VENTOLIN INHALER
provides selective, metered-dose aerosol bronchodilator therapy and being long acting, is suitable for routine maintenance therapy. The rapid action is useful for relieving attacks of acute dyspnoea and doses may be taken prophylactically before exertion or to prevent exercise-induced asthma.

VENTOLIN TABLETS 2mg & 4mg
are available whenever oral bronchodilator therapy is preferred and offer convenient flexibility of dosage.

VENTOLIN SPANDETS
offer sustained duration of action orally and are particularly valuable when nocturnal bronchospasm is a problem.

VENTOLIN SYRUP
the oral bronchodilator of choice whenever liquid medicine is preferred.

VENTOLIN INJECTION
0.5mg in 1ml (500 microgram/ml)
VENTOLIN INJECTION
0.25mg in 5ml (50 microgram/ml)
for subcutaneous, intramuscular or intravenous injection in the rapid relief of severe bronchospasm or status asthmaticus.

Ventolin Inhaler contains salbutamol BP.
The oral and parenteral preparations of Ventolin contain salbutamol sulphate BP.

VENTOLIN
PRIMARY THERAPY IN REVERSIBLE AIRWAYS OBSTRUCTION

Language and Communication in General Practice

Edited by B. A. Tanner, MD, MRCGP

The aim of this volume is to emphasise the importance of communication and language skills in every day medical practice. This is not part of the mass of factual information taught in medical schools.

The material is derived from a symposium held at the Royal College of General Practitioners. The contributors are general practitioners concerned with the science and art of consultation, linguists interested in medicine, developmental psychologists and ethologists.

The book contains a comprehensive and important survey of child language acquisition and assessment, useful for both the general practitioner and paediatrician.

254 Journal of the Royal College of General Practitioners, April 1977
Doncaster Area Health Authority

Vocational Training Scheme for General Practice

Applications are invited from medical graduates who wish to train for a career in general practice and who are fully registered on 1st August, 1977.

The programmes are based on Doncaster Royal Infirmary, a modern district general hospital of 807 beds with Postgraduate Teaching Centre and extensive medical library.

Basic 3-year programme

Involves six months in general practice, followed by four 6-month rotating hospital posts selected from General Medicine, Geriatrics, Obstetrics, Paediatrics, Psychiatry and a combined post consisting of 3 months ENT and 3 months Orthopaedics, with a final six months in general practice.

Modified Programme

Shorter programmes may be arranged for practitioners with previous Senior House Officer experience, or others who require a shorter period of vocational training. These programmes would involve 12 months in general practice plus a variable number of Senior House Officer posts, linked to the Educational Programme.

The Educational Programme consists of weekly meetings continuing throughout the length of the programme. Outside visits are arranged where appropriate e.g. to local industry.

................

Doctors completing the Basic Programme will qualify for the Vocational Training Allowance. The Programme will also be acceptable for D. Obst., F.C.O.G., D.C.H. and the M.R.C.G.P. Housing may be made available to suit individual needs of doctors undertaking the basic 3-year programme.

Applications for the scheme commencing 1st August, 1977 with curriculum vitae and the names of two referees, or any enquiries, should be made in writing to The Secretary, Joint Planning Committee for Vocational Training, c/o Hospital Administrator, Royal Infirmary, Doncaster DN2 5LT. Closing date for applications is 30th April, 1977.

TWO Trainee vacancies from 1st May and 1st July, 1977 in a Group Practice of five. Two partners with MRCGP, and one partner with MRCP.

Day Release course at Manchester University with ample opportunity for post-graduate betterment. Own purpose built premises with ample room to carry out various diagnostic procedures. Own ECG machine, peak flow meter, microscope etc. Full ancillary help attached to the practice.

Candidates interested should apply in writing with curriculum vitae and names of two referees to:
Dr I. F. W. Kerr, Penny Meadow Clinic, Glebe Street, Ashton-under-Lyne, Lancashire.

UNIVERSITY OF BRISTOL

AVON VOCATIONAL TRAINING SCHEME FOR GENERAL PRACTICE

Applications are invited for a three-year traineeship in Vocational Training for General Practice, consisting of two years' practice.

After a short period of orientation of not more than three months in the training practice, trainees will start hospital appointments at S.H.O. level in a Bristol hospital. Two of the rotations offered are: six months in medicine, six months in obstetrics with gynaecology, three months in paediatrics and three months in geriatrics; the remaining six-month period in hospital will be partly or wholly elective, when opportunities will be given to gain experience in special hospital, and other, departments. The trainee will complete the year in practice before or after this elective period. The third rotation will consist of four six-month appointments in the following specialties: accident and emergency, paediatrics, geriatrics and psychiatry. A half-day release course is run during University term-time throughout the three years.

The orientation period in practice should start in December 1977, the first hospital appointments to commence on 1st February, 1978.

Applicants who are suitably qualified should write giving details of previous experience, the names and addresses of two referees and quote a date when they would anticipate being able to start the preliminary orientation period in practice. Applications should be received by 31st May, 1977.

It may also be possible to assist practitioners who have already partly fulfilled the necessary criteria and who wish to complete the requirements for vocational training. The course is recognized for the Vocational Training Allowance by the D.H.S.S. and also for the M.R.C.G.P.

Applications and requests for further information should be sent to: The Course Organiser, Medical Postgraduate Department, University of Bristol, 21 Woodland Road, Bristol, BS8 1TE.
APPLICATIONS ARE INVITED FOR
THE HONORARY POST OF
COLLEGE TUTOR
BRISTOL FRENCHAY AREA

Applications to Dr Sheila E. Fraser,
Honorary Secretary,
South-West England Faculty of the Royal
College of General Practitioners,
Cornerways, Dragon’s Well Road,
Breyntry, Bristol, BS10 7BU.

PARTNER wanted this summer for Norfolk seaside
resort group practice. Partnership consists of four full
time partners plus one part-time woman doctor caring
for 11,000 patients with hospital and other appoint-
ments and a strong commitment to G.P. teaching. Pre-
liminary assistantship or salaried partnership for six
months, with parity in three years. We prefer a vocationally trained doctor who must be eligible for the
obstetric list.
Dr Stuart and partners, Park Surgery, Gr. Yarmouth.

NOTTINGHAMSHIRE AREA HEALTH
AUTHORITY (Teaching)

Worksp and Retford District

WORKSOP VOCATIONAL TRAINING
SCHEME FOR GENERAL PRACTICE

Applications are invited for places in a three-year
course starting 1 August 1977, comprising two periods
of six months in general practice. Two years in S.H.O.
posts including general medicine, paediatrics (D.C.H.)
accident, emergency and general surgery, and obstetrics
and gynaecology (D.R.C.O.G.), S.H.O. posts in gen-
eriatrics and psychiatry are also available to the scheme.
The course is designed as full preparation and is recog-
nised, for the M.R.C.G.P. examination. Married
accommodation is available. There will be a half-day
release study programme and a full week’s introductory
course, with various other educational activities.
Applicants who may wish to take up only part of the
full three-year programme are also invited to apply. As
far as possible the course will be tailored to the individ-
ual.

For further details and application forms please apply:
Dr P. J. Collis, M.R.C.G.P., Course Organiser, c/o
Postgraduate Medical Centre, 34 Watson Road, Work-
sop, Notts, S80 2BN.
The closing date for applications is three weeks from
the appearance of this advertisement.

Vocational Training for General Practice
Croydon Area Health Authority

A vacancy will occur 1st July 1977 for an appoint-
ment to a linked vocational training scheme for
general practice. The scheme consists of posts in
obstetrics and gynaecology, paediatrics, accident and
emergency work and geriatrics (Psychiatry an alter-
native) with one year in general practice during the
total training period of three years. All hospital
posts are in the grade of Senior House Officer and non-
resident. Posts are recognized for D/Obst/
RCOG, DCH and MRCPG exams. Married accom-
modation available during tenure of hospital
appointments. Application form and job description
from: Area Personnel Officer, Croydon Area Health
Authority, General Hospital, Croydon CR9 2RH,
01-688 7755 Ext 27. Closing date is 30th April 1977.

Journal of the Royal College of General Practitioners, April 1977
Shortest Acting
"With doses up to 1 mg. the natriuresis was largely complete within 3 hrs."
"It (Burinex) has a short duration of action, being virtually complete in 3 hrs."

Fast Acting
"The rapid absorption from the gastro-intestinal tract is reflected in the brisk diuresis established within the hour!"
"It (Burinex Injection) onset of action is within 10 min."
"Bumetanide is rapidly absorbed from the gut."

Clinically Effective
"Fourteen patients showed a good diuretic response on bumetanide where previous treatment with frumenide had proved either unsatisfactory or too slow."
"An impressive diminution of the signs of pulmonary oedema was seen in most patients and in some the clearance of alveolar oedema was dramatic."
"Based upon our experience with the use of bumetanide in several hundreds of patients and the detailed studies reported above, it may be concluded that this new diuretic agent is a useful drug in the treatment of congestive cardiac failure."
"Our study... confirms that bumetanide is a potent diuretic effective over a wide dose range and in a variety of clinical conditions."

Well tolerated
"Burinex was extremely well tolerated."
"Bumetanide was well tolerated by patients."
"Overall, bumetanide showed itself to be a safe and effective diuretic when administered to severely ill patients in a busy hospital milieu."

The correct amount of K
"It is known from short-term studies that 1 mg. of bumetanide increases the excretion of potassium by 10-15 mmol daily (Ashby et al, 1972; Olesen et al, 1973; Davies et al, 1974). Two tablets of the combined preparation Burinex K contain 1 mg of bumetanide and 16 mmol of potassium."

At the correct time
"35% of the potassium chloride is released by one hour, the rest being released over a period of six hours."

Patients prefer Burinex K
"These results indicate that when long-term diuretic/potassium supplement therapy is required, Burinex K is a more acceptable regimen to patients than one in which diuretic + Slow K are given separately."
"Patients showed a highly significant preference to take two tablets on one occasion (Burinex K) rather than two different types of tablet on three separate occasions (Lasix + K)."

The Morning OR Evening diuretic
"The rapid onset and short duration of action of loop diuretics are clearly desirable when a rapid diuresis is indicated, and when given in the evening to patients with chronic heart failure, the short duration of action can ensure a good nights sleep undisturbed by nocturia or breathlessness."
"The use of potent and short-acting diuretics such as bumetanide allow the physician and patient scope to decide upon the most appropriate time for administration and so reduce major disruptions in the patient’s daily routine."
"Patients who go out to work may find Burinex K given in the evening more socially acceptable."
