Introducing a unique 12-hour treatment course for cystitis.

Complete in two doses: Now you can treat cystitis with unparalleled simplicity.

With the new Amoxil Twinpack you have a complete course for cystitis in only 2 x 3g sachets. The two doses are taken 10 to 12 hours apart.

Proven to be just as effective as a conventional 10 day treatment course, Amoxil Twinpack provides rapid and complete symptomatic relief. With a promise of patient compliance that's simply unique.

Amoxil 3g x 2
TwinPack
A New Children's Classic

Talpen Syrup

talampicillin

Talpen syrup is one therapeutic agent which might claim to be a classic from the start.

Talpen syrup offers the benefits of Talpen for the treatment of bacterial infections in children:—

- Talpen offers ampicillin's rapid bactericidal action¹ to resolve infection quickly and thus reduce pain and fever.
- Talpen is very well tolerated.² Its excellent absorption means that the incidence of diarrhoea is very low.²
- Talpen is acceptable to your patients.

A very pleasant fruit flavour coupled with a simple t.i.d. dosage ensure that Talpen syrup will be liked by children—and appreciated by their mothers as well.

Talpen Prescribing Information Following oral administration Talpen is particularly well absorbed and rapidly hydrolysed to give high blood levels of ampicillin. Typical indications include: Upper Respiratory Tract Infections. Bronchitis. Otitis Media. Urinary Tract Infections. Presentations: Talpen syrup: Each 5 ml contains talampicillin naphate (267 mg) equivalent to 125 mg talampicillin hydrochloride. Available in bottles of 100 ml. Talpen tablets: Each tablet contains 250 mg of the ampicillin ester talampicillin hydrochloride. Usual Oral Dosage: Children 2-10 years: 5 ml syrup three times a day. under 2 years, the equivalent of 3-7 mg talampicillin hydrochloride per kg bodyweight three times a day. Adults: 1 tablet or 10 ml syrup three times a day. Contra-indication: Pencillins hypersensitivity. Precaution: Talpen is not recommended for patients with severe renal or hepatic impairment. Side-effects: As with other pencillins. An enanthematous rash may occasionally occur. The incidence is particularly high in patients with infectious mononucleosis. The incidence of diarrhoea as a side effect is significantly lower following the administration of Talpen than following oral ampicillin. Daily Cost (Basic NHS): Talpen syrup: 5 ml t.i.d. 26p. Talpen tablets: one t.i.d. 26p (ex 100 pack). Prices correct at January 1979.

Further information is available on request to the Company Talpen (talampicillin) is a product of British research from Beecham Research Laboratories, Brentford, England. A branch of Beecham Group Limited. PL0038/0209/0243

Talpen, BRL, and the company logo are registered trade marks.
A delicate skin problem but one that must be solved

When prescribing a topical steroid to treat a delicate area, a major consideration is to avoid the risk of untoward effects.

Eumovate fulfills the need for a topical steroid with a wide margin of safety, providing significant anti-inflammatory activity without a corresponding increase in the risk of side effects.

Clinical evidence has shown that the minimal effect on HPA function observed with Eumovate was in definite contrast to that seen with other preparations.

Prescribing information

Uses
Eumovate is suitable for treating the milder forms of eczema, seborrhoeic dermatitis and other steroid responsive skin conditions.

Dosage and administration
Apply up to four times a day until improvement occurs, when the frequency may be reduced.

Side effects
With all topical corticosteroids local atrophic changes may possibly occur following prolonged and intensive treatment. Also prolonged use of large amounts or treatment of extensive areas may produce the features of hypercorticism. This is more likely to occur in infants and children, and with occlusion. In infants, the napkin may act as an occlusive dressing.

In the unlikely event of signs of hypersensitivity appearing, application should stop immediately.

Precautions
Long-term continuous therapy should be avoided, particularly in infants and children in whom adrenal suppression can occur even without occlusion.

Appropriate chemotherapy should be used wherever infection of the skin is present. Any spread of infection requires withdrawal of topical corticosteroid therapy. With all corticosteroids, prolonged application to the face is undesirable.

Topical steroids should not be used extensively in pregnancy, i.e., in large amounts or for prolonged periods.

Contra-indications
Bacterial, fungal or viral diseases of the skin.

Basic NHS cost

Eumovate is a trade mark

Eumovate (fluocinolone acetonide)
An investment in safety and efficacy
“Good blood pressure control was obtained easily and the treatment regimen was simpler than that with previous therapy received by the patients. Few incremental changes in dosage were required and all but six (10%) patients were controlled by labetalol alone.”

(Current Medical Research and Opinion, 1978, 5, 618)

PRODUCT INFORMATION
PRESENTATION AND BASIC NHS COST
Trandate Tablets 100mg, Trandate Tablets 200mg and Trandate Tablets 400mg each contain 100mg, 200mg and 400mg labetalol hydrochloride, respectively. In containers of 50 and 250 tablets. Basic NHS cost of 50 tablets of each strength is £3.44, £4.88 and £7.76.

INDICATIONS
Treatment of all grades of hypertension when oral antihypertensive therapy is indicated.

DOSAGE AND ADMINISTRATION
The recommended starting dose is 100mg three times daily. If necessary, this may be increased gradually at intervals of one or two weeks. A daily dosage of 600mg is usually adequate but severe cases may require up to 2,400mg daily. Once the optimum dosage is established a twice-daily dosage regimen can be used. Trandate Tablets should preferably be taken after food.

For transfer of patients from other antihypertensive therapy see Data Sheet. Trandate therapy is not applicable to children.

CONTRA-INDICATIONS
There are no known absolute contra-indications.

WARNING
There have been reports of skin rashes and/or dry eyes associated with the use of beta-adrenoceptor blocking drugs. The reported incidence is small and in most cases the symptoms have cleared when the treatment was withdrawn. Discontinuation of the drug should be considered if any such reaction is not otherwise explicable. Cessation of therapy with a beta-adrenoceptor blocking drug should be gradual.

PRECAUTIONS
Trandate should not be given to patients with uncompensated or digitalis-resistant heart failure or with atrioventricular block. The presence of severe liver disease may necessitate reduced doses of Trandate. Care should be taken in asthmatic patients and
simplifies the management of hypertension

for the doctor

- Trandate provides effective control of the hypertension
- Trandate is suitable for a wide range of patients
- Trandate obviates the need for multi-drug regimens or fixed combination products
- Trandate needs few incremental changes in dosage for control of most patients.

and for the patient

- The overall incidence of side effects is low
- Trandate avoids unwanted effects such as sedation and lack of energy
- The dosage regimen is simple – just one tablet two or three times a day
- Patients feel better on Trandate and the treatment does not restrict activity

"It is therefore particularly encouraging that 74% of patients in this study reported that they were much less tired, more energetic, more active physically and more mentally relaxed than when on their previous antihypertensive therapy."

(Practitioner, 1979, 222, 131)
The third in a series of Hibernating animals: the Brown Bear (Ursus arctos arctos) hibernates from mid November

For safe, natural, undisturbed sleep...

REMROS
Nitrazepam/DDSA

- Rapidly induces natural sleep
- Increases the duration of sleep and reduces the number of nocturnal awakenings
- No hangover or confusion on waking
- Minimum changes in REM pattern
- Small dependence risk
- High comparative safety in overdosage
- Well tolerated and producing no unwanted systemic effects
- Uniquely available in two strengths (5mg & 10mg)

Presentation circular bilobed 12mm tablets marked DDSA on obverse with single break line on reverse, containing Nitrazepam 5mg, white 5mg, yellow 10mg. Uses an effective hypnotic agent recommended when a rapid onset of sleep is required. REMros increases total sleep time lasting 6-8 hours, with a reduced number of nocturnal awakenings, REMros does not act by depression of brain structures, but promotes sleep with minimal changes in the rapid eye movement pattern (REM). Sleep disturbances due to organic conditions, tension, stress, anxiety and depression. The treatment of insomnia in the chronically ill requiring long or short term hypnotics. Pre-operative sleep. Dosage and administration, adults - the recommended dose is 5mg before retiring. This may be increased up to 10mg. Children - 0.25mg/kg up to a daily maximum of 2.5mg. Treatment should be commenced with the smaller 2.5mg dose in the elderly. REMros is not recommended for administration to children. Contra-indications, warnings, etc. It is not advisable that REMros be used in pregnancy and lactation. Patients receiving treatment with REMros should be warned against the dangers of taking alcohol, barbiturates and other CNS depressants, and to exercise great care in handling mechanical equipment and driving motorized vehicles. Cures should be taken in patients with respiratory depression. Side-effects such as ataxia and drowsiness may occur, although hangover effect is minimal. Overdose, endocrinology by ataxia, drowsiness and dizziness, gastric irritation and systolic treatment. Pharmacological precautions, protect from light and store in a well-closed container in a dry cool place. Legal category, 5.4b. Basic NHS price 5mg £1.40 per 100 and 10mg £2.50 per 100, also packs of 500 (both strengths). Further information, REMros may be given to patients receiving anti-coagulant therapy and cardiovascular, anti-hypertensive and anti-depressant drugs. Product licence numbers 0225/0022; 0225/0031. FENFLURAMINE HYDROCHLORIDE B.P.

FOR THE LONG-TERM MANAGEMENT OF OVERWEIGHT PATIENTS

- Effective short and long-term weight loss.
- Only non-stimulating anti-obesity drug available.
- Additional clinical benefit in maturity onset diabetes.
- Flexible dosage regimen.

THE PONDERAX PROFILE HELPS BOTH MIND AND BODY ADAPT TO DIET

**Short-Term Study 1**

**Long-Term Study 2**

---

**Prescribing information**

**Presentation**
PONDERAX RCAPS. Prolonged action formulation in hard gelatin capsule, size 3 with clear body and opaque blue cap, printed in black with PY 60 containing small yellow pellets. Each prolonged action capsule contains 60mg Fenfluramine Hydrochloride B.P.
PONDERAX 20mg: Blue-grey sugar-coated tablet, containing 20mg Fenfluramine Hydrochloride B.P.
PONDERAX 40mg: White sugar-coated tablet, containing 40mg Fenfluramine Hydrochloride B.P.

**Uses**
1. Obesity
2. Maturity onset diabetes
For the control of post-prandial hyperglycaemia in maturity onset diabetes who achieve marginal control either with diet alone or diet plus sulphonylureas.

**Dosage and administration**

**Dosage (1) Obesity**

<table>
<thead>
<tr>
<th>Adults</th>
<th>1-2 mg per kg of desirable body weight according to the severity of obesity.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Children</td>
<td>Recommended adult daily dose of PONDERAX tablets. 6-12 years: 20mg 10-12 years: 40mg (in divided doses). This may be increased to 60mg if the child is grossly obese. A gradual build-up and reduction of dosage is advisable.</td>
</tr>
</tbody>
</table>

**PONDERAX RCAPS**: The capsule form is not suitable for children’s dosage.

**Dosage (2) Maturity Onset Diabetes**

| Adults | The dosage must be adjusted to the needs of the individual patient and may vary between 80-120mg daily taken either as tablets or PONDERAX RCAPS. PONDERAX may be given together with sulphonylureas. |
| Children: Not applicable. Administration: PONDERAX tablets and RCAPS should be taken empty. PONDERAX tablets should be taken in divided daily doses and PONDERAX RCAPS because of the slow release of the active constituent, need to be taken only once daily, preferably before breakfast. If possible, the tablets or capsules should be taken half an hour before food. |

**Contra-indications, warnings etc.**
Should not be used concomitantly with MAOIs. There should be an interval of 3 weeks between stopping MAOIs and starting PONDERAX. Care should be taken in patients with cardiac disease or those receiving antidepressant therapy.

**Side-effects**
Some patients experience nervousness with the bowels, mild sedation and goddess may occur. Nausea and heartburn have been reported. Side-effects may be avoided by using a gradual build-up of dosage. Other patients experience chills, anorexia, and a transient and temporary reduction of dosage will usually eliminate them. Side-effects only rarely necessitate any interruption of therapy.

**Overdosage**
The following symptoms have been reported: headache, tachycardia, facial flushing, hyperreflexia, agitation, weight which can progress to vomiting, convulsions, unconsciousness, hypotension. Depression of respiration, cardiac arrhythmias, ventricular fibrillation and death may occur following very high overdosage.

**Action to be taken in the event of an overdose**
1. Continuously monitor ECG
2. Use diazepam control convulsions
3. Reduce hypothermia
4. Use anti-arrhythmic drugs (e.g. beta-blockers) to control cardiac arrhythmias.

**Pharmaceutical precautions**

- **Storage**: PONDERAX RCAPS should be stored in a cool, dry place.
- **Legal Category**: POM
- **Package quantities**: PONDERAX RCAPS: Push-through blister strips of 15 capsules. Carton of 60 capsules (8 strips).
PONDERAX 20mg and PONDERAX 40mg: Push-through blister strips of 20 tablets. Carton of 100 tablets (5 strips).

"Tagamet"
The long and the short of it

Tagamet, now available in over 80 countries throughout the world, has been prescribed in the treatment of over 3,500,000 patients. By its unique mode of action in reducing gastric acid secretion, 'Tagamet' has been shown to be unequalled in the short-term treatment of reflux oesophagitis and peptic ulceration; particularly for providing rapid symptomatic relief and complete healing in most patients with duodenal ulceration.1-3

Unfortunately, duodenal ulceration is a naturally relapsing disease, irrespective of the agent which initially induced remission. Thus considerable interest has been aroused by the possibility of using longer-term 'Tagamet' treatment at a maintenance dose in order to minimise the risk of relapse.

Long-term treatment
In fact, 'Tagamet' is the only drug which has been proved to reduce the frequency of relapse in duodenal ulceration.4-8 Overall results from on-going clinical trials have shown that in treatment periods of up to a year (mean treatment period 6.3 months) only 9.5% of 'Tagamet'-treated patients relapsed compared with 49.9% in the placebo group.

In patients who have healed their ulcers and who may benefit from maintenance therapy, treatment should be continued for at least 6 months at a reduced dosage of 400mg nocte.

The nature and incidence of untoward symptoms found in long-term trials has not differed greatly from that observed in short-term trials.

Short-term treatment
Reflux Oesophagitis—a review of 120 patients
'Tagamet' 67% complete healing/marked improvement
Placebo 14% complete healing/marked improvement

This group of patients included patients with serious oesophagitis having ulcers and erosions diagnosed at endoscopy.

Benign Gastric Ulcer—a review of 409 patients
'Tagamet' 75% completely healed
Placebo 41% completely healed

An analysis of treatment periods showed that significantly more patients had complete healing after 6 weeks (76%) compared with those treated for 4 weeks (62%). (N.B. Malignant gastric ulcer should be excluded.)

Duodenal Ulcer—a review of 1095 patients
'Tagamet' 77% completely healed
Placebo 41% completely healed

For those patients who may benefit from longer-term treatment, therapy should be continued for at least 6 months at a reduced dosage.

Tagamet
cimetidine
Unique control of gastric acid secretion
DUODENAL ULCERATION. WHAT COMES NATURALLY?

'Tagamet' has been shown to be unequalled in the short-term treatment of duodenal ulceration, inducing early and dramatic symptomatic relief, rapid healing and subsequent remission.12

In addition, 'Tagamet' has been shown to prevent relapse during longer-term maintenance therapy;3-8 the only drug so far proven to have this property.

However, experience to date tends to suggest that for many patients the natural history of the disease remains unaltered despite medical intervention8 and the question inevitably arises – will patients with a severe condition require medical treatment for the rest of their lives?

This can only be answered when the natural history of duodenal ulcer disease is fully understood. Some aspects of the natural history of the disease, however, have been well recognised for some years.

It is a naturally relapsing condition; in fact, it has been estimated that 75-80% of patients have at least one recurrence within 5 years of the initial episode, some relapsing several times in one year.

The onset of duodenal ulceration is related to age, as shown in Figure 1. The initial episode is most likely in the 30-39 age group for males and slightly later in life for females.

Of greater interest is the natural development of the disease following its onset. Figure 2 demonstrates how the disease tends to 'burn itself out' after a certain period of time.3 In a group of duodenal ulcer patients who were followed for 15 years, the symptoms tended to peak in severity after 5 years and then progressively remit until at 10 years no more than 5% of patients had severe symptoms.

This finding has been recently substantiated by workers in Denmark who found in a retrospective study that the disease is present for a finite time.9

The workers concluded that most patients with duodenal ulceration will need only intermittent or continuous cimetidine treatment for a limited period.9

CLASSIFIED ADVERTISEMENTS AND NOTICES

Classified advertisements are welcomed and should be sent to: Mr Mike Fulton, Advertisement Director, The Journal of the Royal College of General Practitioners, Update Publications Ltd., 33/34 Alfred Place, London WC1E 7DP. Copy must be received by the first of the month preceding the month of issue to ensure inclusion. Every effort will be made to include advertisements received after this date but publication cannot be guaranteed and the advertisement may have to be held over to the following issue.

The charge for space in this section is £5.75 per single column centimetre, plus 25p if a box number is required. Fellows, members and associates of the Royal College of General Practitioners may claim a ten per cent reduction.

The inclusion of an advertisement in this Journal does not imply any recommendation and the Editor reserves the right to refuse any advertisement. All recruitment advertisements in this section are open to both male and female applicants.

Opinions expressed in The Journal of the Royal College of General Practitioners and the supplements should not be taken to represent the policy of the Royal College of General Practitioners unless this is specifically stated.

POSTGRADUATE MEDICAL INSTITUTE
UNIVERSITY OF EXETER

Applications are invited for a full-time course on the Management of the Elderly. This is being held at the Exeter Postgraduate Medical Centre from 5 to 9 November 1979.

This course is recognized under Section 63 and will include a wide variety of subjects and visits to a Rehabilitation unit and a multidisciplinary centre.

Applications should be sent to:
Mrs M. Wood,
Postgraduate Medical Institute,
Exeter Postgraduate Centre,
Barrack Road,
EXETER EX2 5DW.

HEALTH PROMOTION IN GENERAL PRACTICE

A one-day workshop is to be held on Wednesday, 7 November 1979, in Exeter, to consider the role of Health Education in General Practice. Section 63 approval. Organized by the Health Education Council in conjunction with the Department of General Practice, University of Exeter.

Further details from:
Sally Jeffery,
The Health Education Council,
78 New Oxford Street,
London WC1.
Telephone: 01-637 1881

THE EAST LONDON GENERAL PRACTITIONER VOCATIONAL TRAINING SCHEME
IN CONJUNCTION WITH THE LONDON HOSPITAL

Applications are invited for the four posts in this scheme, starting on 1 February 1980. Each trainee will be invited to spend one month in general practice, two years rotating in posts at The London Hospital and finally one year in general practice. The hospital posts include Obstetrics and Gynaecology, Geriatrics, General Medicine, Paediatrics, Psychiatry and the Emergency and Accident Department. A half-day release course is held at the East London Postgraduate Centre, Bethnal Green. Applicants will be welcome to visit the training practices.

Further details may be obtained from the Course Organizer, Dr R. M. Griffiths, 35 High Street South, East Ham, London E6, or from the Medical Staffing Office, The London Hospital.

Applications (no forms provided), giving names and addresses of two referees, should be received by 3 November 1979 and addressed to: The Medical Staffing Office, The London Hospital, Whitechapel E1 1BB.
VOCATIONAL TRAINING FOR GENERAL PRACTICE

Devon Area Health Authority/Exeter University/
Exeter Health Care District

Applications are now invited for four places starting on 1 August 1980 for the vocational training scheme of the Department of General Practice in the Postgraduate Medical Institute of the University of Exeter. The course is designed and recognised for the MRCGP examination.

The four fixed programmes available are:

A. General practice (two months)
   Accident and emergency (three months)
   ENT (three months)
   Gynaecology (three months)
   Ophthalmology (three months)
   Paediatrics (six months)
   Psychiatry (six months)
   General practice (ten months)

B. General practice (two months)
   ENT (three months)
   Gynaecology (three months)
   Ophthalmology (three months)
   Accident and emergency (three months)
   Psychiatry (six months)
   Paediatrics (six months)
   General practice (ten months)

C. General practice (two months)
   Gynaecology (three months)
   Ophthalmology (three months)
   Accident and emergency (three months)
   ENT (three months)
   Geriatrics (six months)
   Obstetrics (six months)
   General practice (ten months)

D. General practice (two months)
   Ophthalmology (three months)
   Accident and emergency (three months)
   ENT (three months)
   Gynaecology (three months)
   Obstetrics (six months)
   Geriatrics (six months)
   General practice (ten months)

Throughout the three years a half-day release course is held: trainees participate actively in the planning of the course and there is emphasis on small-group work. Additional courses are available for trainees and include an introductory course for each intake, an intensive MRCGP course, and a course on management in general practice. Trainees are encouraged to carry out research work during their course and six articles have already been published by Exeter trainees.

The Marwood prize and the Syntex award are open to Exeter trainees annually.

The Department's prospectus is available on request and the principles underlying the teaching have been published as *Occasional Paper 4 – A System of Training for General Practice* (available from RCGP, 14 Princes Gate, Hyde Park, London SW7 1PU). The Department's practice management course has been expanded into a book, *Running a Practice*, published by Croom Helm, London.

This is the only University Department of General Practice outside a medical school in the British Isles.

Applications and enquiries should be made by 13 November 1979.

Dr D. J. Pereira Gray, FRCGP,
Department of General Practice,
Postgraduate Medical Centre,
Barrack Road,
Exeter, Devon EX2 5DW.

COLLEGE ACCOMMODATION

Charges for college accommodation are reduced for members (i.e. fellows, members and associates). Members of overseas colleges are welcome when rooms are available. All charges for accommodation include breakfast and are subject to VAT. A service charge of 12½ per cent is added. Children aged 12 years and over, when accompanied by their parents, can always be accommodated; for those between the ages of six and 12 years, two rooms are being made available on a trial basis. Children under the age of six cannot be accommodated and dogs are not allowed. Residents are asked to arrive before 18.30 hours to take up their reservations.

From 1 September 1978, charges are (per night):

<table>

Approval under Section 63 is being sought.

FACULTY OF HOMEOPATHY
MIDLANDS BRANCH

Fifth Annual Symposium on Homeopathic Medicine:
Saturday, 10 November 1979, 10.00 to 17.00 hours, at Selly Oak Hospital, Birmingham.

A basic course, designed to introduce the principles and practice of homeopathic medicine, with special emphasis on its everyday use in general practice.

Applications, enclosing registration fee of £6 to:
Dr R. A. F. Jack, The Limes, Lydiate Ash,
Bromsgrove, Worcs. B61 0QL.
SUPPLEMENT TO THE JOURNAL OF THE ROYAL COLLEGE OF GENERAL PRACTITIONERS

Prescribing in general practice

The cost of the drugs prescribed by British general practitioners now exceeds the cost of the doctors’ own income and expenses combined. The number of prescriptions for psychotropic drugs has doubled between 1964 and 1974 and the applications of prescribing in general practice are bedevilled by factors quite unrelated to clinical pharmacology, such as the symbolic use of drugs, patient and doctor expectations and attitudes, and pressures from advertising.

Who are the high cost prescribers? What, if any, is the influence on a doctor’s prescribing of being trained overseas? What are the facts and what are the trends?

Prescribing in General Practice is one of the most comprehensive booklets ever issued on prescribing in British general practice; it was published as a Supplement to this Journal and sponsored by the Department of Health and Social Security.

Prescribing in General Practice is available now from 14 Princes Gate, Hyde Park, London SW7 1PU, price £3.00, post free.

Notification of change of address

Members changing their address are asked to let the Registrar of the Royal College of General Practitioners know as soon as possible, with the effective date, so that the Journal can continue to be sent to them without delay.

Please write to: The Registrar, Royal College of General Practitioners, 14 Princes Gate, Hyde Park, London SW7 1PU.

Fluvirin contains only the protective haemagglutinin and neuraminidase antigens of the virus, adsorbed on to aluminium hydroxide and virtually none of the other viral components. For this reason it has been described as 'the ultimate in purified antigens' and an October '78 issue of BMJ endorses the use of surface antigen vaccines like FLUVIRIN against influenza: 'Surface antigen vaccines seem to cause fewer minor side effects, such as sore arms and febrile reactions, than zonally purified whole virus vaccines, and in the view of many they are preferable, especially for children and when two doses have to be given.'

It makes sense to prescribe FLUVIRIN.

FLUVIRIN
The advanced British influenza vaccine

PRESERVING INFORMATION. Presentation: Fluvirin, adsorbed surface antigen influenza vaccine, contains in 0.5ml dose, the strains of influenza virus currently recommended. Each 0.5ml dose contains the haemagglutinin and neuraminidase antigens prepared from: 200 Units of A/USSR/92/77 (H, N), 200 Units of A/England/321/77 (H, N). 200 Units of B/Hong Kong/8/73 adsorbed on to aluminium hydroxide. Uses: Protection against influenza. Dosage: Adults aged over 24 years: Single dose of 0.5ml by deep subcutaneous or intramuscular injection; it must NOT be given intradermally. Children aged 4 to 9 years: 2 doses of 0.5ml, one month apart. Children and adults aged 9 to 24 years: 2 doses of 0.5ml, one month apart (if previously primed with H, N, sub-type one dose of 0.5ml is sufficient). If the vaccine has been stored in a refrigerator it must be allowed to reach room temperature before use; the container should be well shaken immediately before making the injection. Unused contents of multidose vials should be discarded at the end of the day's session. Warnings: Contra-indicated in persons sensitive to egg protein. The potential risk of adverse reactions to vaccines should be taken into account in patients with a personal or family history of allergy. Spirit should not be allowed to come in contact with the vaccine. Side effects: Redness and soreness at the site of injection, headache, pyrexia and a feeling of malaise may occur. Package quantities: Single dose ampoules of 0.5ml, disposable syringe pack of 0.5ml at a basic NHS cost of £1.70 and multidose vials of 5ml.

Further information is available on request.
Fluvirin is a trade mark of Duncan, Flockhart & Co. Limited, London E2 6LA
As a fast acting diuretic

Burinex K
bumetanide and slow-release potassium chloride

is unbeatable...

as a potassium supplement it's unforgettable

Your patients rarely forget to take their 'water pill' but all too frequently fail to take their potassium supplement if you prescribe it separately. Burinex K solves this problem because Burinex the 'most effective natriuretic agent'² 'coats' the potassium core – to make it truly unforgettable.

In addition – because of the shape and size – it's easier to swallow than the most commonly used potassium supplement alone.³

Burinex K in CCF right from the start
