

Paramol-118 is routinely effective in relieving pain commonly encountered in general practice e.g., arthritis, muscular rheumatism, vertebral and low back pain.

A single tablet of Paramol-118 provides relief by the joint action on pain of 500mg paracetamol and 10mg dihydrocodeine tartrate. This combination effectively treats pain with minimum intake of drug - particularly advantageous in long term therapy.

paracetamol BP and dihydrocodeine tartrate BP

JUST THE ONE for mild-to-moderate pain

Presentation and basic NHS cost:
White tables angraved DF/P, each tablet containing:
Passcraturol BF 500 mg
Dhiyddocodeine tartrate BP 10 mg
25 tablets (ex 500) cost 37 8p

Indications Relief of moderate pain.

Dosage and administration
Paramol-118 tablets should, if possible, be taken

Paramol-118 tablets should, if possible, be taken during or after meals:
Adults and children over 12 years: One tablet every four hours. This may be increased to two tablets four times a day if necessary.
Paramol-118 is not recommended for children under 12.

Contra-indications, warnings, etc. Precautions. Paramol-118 should be given with caution to patients with allergic disorders and should not be given during an attack of asthma. Caution if there is marked impairment of liver function or advanced kidney disease.
Unnecessary administration of drugs during the first trimester of pregnancy is undesirable.

Side effects

Constipation, nausea and giddiness

Further information is available on request

Paramolis a trade mark of Duncan, Flockhart & Co. Limited, London E2 6LA.

Trandate offers a unique means of controlling hypertension by combining the benefits of both betablockade and peripheral vasodilatation in just one drug. Suitable for all grades of hypertension, control can usually be achieved with Trandate alone simply by increasing the dose.

With a low incidence of side effects, Trandate provides simple and logical therapy avoiding the complexities of multi-drug regimens or fixed-dose combination products.

Trandate uncomplicates hypertension for both doctor and patient.

Trandate labetalol hydrochloride

Dual action, singular efficacy.

British Medical Journal

Major New Series for all GPs Library of General Practice

- Presents medicine in a unique way—not as it is taught in hospitals but as it is actually encountered
 in the community
- Each volume deals with an important aspect of general practice— written by a GP well known for his work in that field
- Places each topic in its scientific and epidemiological context and provides practical guidelines for patient management

First Volume **Hypertension** Julian Tudor Hart 1980 332 pages illustrated paperback £7.50 Hypertension presents the biggest single problem in continuing primary care. This is the first British account of its management in the primary care setting. Part 1 deals with causes, consequences and effectiveness of treatment. Part 2 covers practical management; treatment, with and without drugs; practice organisation. Contains 10 appendices for quick reference and a self-assessment section of true/false questions and clinical simulation exercises.

Forthcoming volumes include . . .
