Ismelin-Navidrex-K

a logical development for the
treatment of hypertension
In General Practice

In line with modern concepts of treatment

It is now widely accepted that the addition of a thiazide diuretic such as Navidrex to the more potent hypotensive agents increases their effectiveness and decreases side-effects.

Effective in a wide range of patients

Almost all patients respond to Ismelin-Navidrex K which is suitable for all grades and types of hypertension (except phaeochromocytoma)

Simplifies treatment

Ismelin, Navidrex and a potassium supplement in one tablet provide complete therapy in the most convenient way. The special formulation prevents gastric upsets or failure of tablet disintegration.

Ismelin-Navidrex K tablets contain 10 mg. Ismelin, 0.15 mg. Navidrex and 400 mg. potassium chloride. Basic N.H.S. price of 100 tablets: 31s. 4d.

A week ago he couldn’t do this

ANUSOL
PUT HIM BACK ON THE JOB

He went on working until he couldn’t carry on any longer. ANUSOL, of course, was imperatively needed. Pity it hadn’t been used sooner. However, the antiseptic, decongestive action of this haemorrhoidal suppository was rapidly effective as usual. Where inflammation is an additional problem, ANUSOL-HC (containing hydrocortisone) is the specific treatment. When the inflammation has been controlled, ANUSOL plain is the ideal continuation therapy. Both ANUSOL-HC and ANUSOL plain are available as suppositories or ointment.

PHARMACEUTICAL SPECIALTIES (MAY & BAKER) LTD · DAGENHAM

An M&B brand Medical Product
FORMULA: Aluminium hydroxide gr. 4; Magnesium trisilicate gr. 7.5; (the combination advocated in the B.N.F. (Standard edition) page 21).

RECOMMENDED DOSE: Two GELUSIL tablets, or two teaspoonfuls of GELUSIL suspension after meals or as symptoms arise.

The background — greasepaint and greasy food; the effort to enrich fictitious characters with one’s own personality; the fight to the top; the struggle to stay there. One of the occupational risks — peptic ulcer. But GELUSIL protects against ulcer symptoms, gives long-lasting, meal-to-meal relief. It is free from the side effects common to many antacids. There is no acid rebound.

GELUSIL ANTACID

TO TREAT THE PATIENT AS WELL AS HIS ANGINA

PERIFENIL
for the patient with angina

FOR THE ANGINA
PERITRATE is an established coronary vasodilator, increasing coronary blood flow and maintaining its effect for 4 to 5 hours. NARDIL, perhaps by virtue of its MAO inhibitory action, also increases coronary blood flow and cardiac output.

FOR THE PATIENT
NARDIL, the exemplar of the newer antidepressants, relieves the depressive or psychosomatic element seen in many anginal patients. Both the constituents of PERIFENIL have just received the cachet of official approval, for it is proposed to include monographs on both substances in the 1963 British Pharmacopoeia.

Each PERIFENIL tablet contains:—
PERITRATE (pentaerythritol tetranitrate) 20mg. NARDIL (phenelzine) 7.5mg.

DOSAGE
One tablet four times a day before meals.

PERIFENIL

Betnelan, the new oral steroid (betamethasone) developed by Glaxo, is particularly suitable for use with other measures in the treatment of severe asthma. Betnelan is not suggested for milder cases which are adequately controlled by other measures.

**Periodic Acute Attack**
Betnelan is indicated when the conventional management of asthma is interrupted by acute attacks. Short-term therapy with Betnelan should control the exacerbation and allow conventional measures to be resumed.

**Severe Attack**
In attacks of extreme severity (status asthmaticus) all recognised measures must be taken. Corticosteroid injections (Efcoatel Soluble or Predsol Injection) should be given initially, while at the same time oral treatment with Betnelan should be started. When there is no immediate threat to life, Betnelan alone will be found adequate.

**Severe Chronic Asthma**
When existing treatment gives only slight relief and the patient’s activities remain restricted, Betnelan can be of special help. Continuous administration may be necessary and is well justified by enabling a reasonably useful life to be followed. Treatment should begin with a short, intensive course of Betnelan, using bronchodilators and other measures. Dosage of Betnelan should be decreased gradually until the minimum level is found for reducing symptoms to tolerable limits. Often this may be no more than half a tablet twice daily.

**Hay Fever**
In severe attacks, uncontrolled by normal therapy, the condition usually responds rapidly to short-term Betnelan therapy.

SAROTEN
(Amitriptyline)

A new antidepressant drug with a markedly favourable influence on agitation and anxiety.

THE MAIN CHARACTERISTICS OF SAROTEN ARE:

a. Pronounced antidepressant effect which is seen clinically in all forms of depression in both neurotic and psychotic patients.

b. A significant beneficial effect on agitation and anxiety — quite absent in the monoamine oxidase inhibitors.

c. No reports of any toxic effects on kidney, liver, or blood.

THE PRINCIPAL INDICATIONS FOR SAROTEN ARE:

a. Moderate to severe depression.

b. Depression associated with agitation or anxiety.

c. Depression associated with the climacteric period.

Saroten was developed in the research laboratories of our associate, Lundbeck and Company, Copenhagen

The modern method of relieving nasal and respiratory congestion is simply the swallowing of 'Actifed' Tablets (or Syrup for children). These products bring safe, rapid and prolonged relief without risk of secondary engorgement or inhibition of ciliary activity.

'Actifed' Tablets and Syrup contain triprolidine hydrochloride and pseudoephedrine.

'Actifed' Compound Linctus combines the properties of 'Actifed' with the cough suppressant action of codeine phosphate. It is particularly useful if the cough is associated with respiratory congestion, e.g. in the common cold or in bronchial asthma.

'Actifed'

Burroughs Wellcome & Co (The Wellcome Foundation Ltd) London
accelerates healing rates by 25-50%*

Prolonged and expensive treatment of chronic ulcers may be avoided by the use of Cicatrin, the leading amino-acid-antibiotic preparation for topical application.

Further evidence of its efficacy is provided by a recently controlled clinical trial to evaluate the influence of various topical applications on the healing rates of stasis ulcers which shows that Cicatrin with its combination of selected amino-acids and antibiotics accelerates the healing rates by 25-50%.

It is also significant that in one group where the main difference between the two preparations was that one contained amino-acids and antibiotics (Cicatrin) and the other antibiotics only, the healing time in the Cicatrin treated group was shortened considerably both in bed rest and ambulatory cases.

MERCK SHARP & DOHME LIMITED, Hoddesdon, HERTS
Often two sides of the same coin

depression and anxiety

Depression may frequently be associated with a strong anxiety component, and vice versa. Thus, in practice, the distinction is frequently blurred, and may escape even the most expert diagnosis. Difficulties in diagnosis have led to the misuse of tranquillisers—particularly their use in depression masked by anxiety. In such cases the underlying depression may be deepened. On the other hand the high failure rate of many antidepressants is due to their inability to control the concurrent anxiety. 'Tryptizol', a single compound, treats the depression and also the anxiety and agitation that commonly accompany it.

TRYPTIZOL
AMITRIPTYLINE HYDROCHLORIDE
Regd.

effectively treats depression and promptly relieves accompanying anxiety and tension

References, abstracts of published papers, and detailed literature covering administration, precautions and side-effects, available on request. 'Tryptizol' (amitriptyline hydrochloride) is supplied as tablets, 25 mg. (yellow) and 10 mg. (blue); and as 'Tryptizol' Injection—10 ml. vials, each ml. containing 10 mg. amitriptyline hydrochloride.

Made in England by

Modern Treatment Year Book 1962

Edited by SIR CECIL WAKELEY, Bt., KBE., CB., LL.D., MCh., DSc., FRCS., FRSE., FRSA., FACS., FRACS

The Modern Treatment Year Book has been specially compiled to keep busy practitioners informed on the latest therapeutic methods and practical applications of the latest research.

The new 1962 volume covers a wide variety of topics, giving up-to-date diagnosis and treatment of many conditions encountered in daily practice. The contributors are all expert in the subjects about which they write and the fruits of their experience are placed before the reader in concise, practical and easily assimilated form. In effect this book is a reference-course in practical therapeutics.

BRITISH MEDICAL ASSOCIATION
THE COLLEGE OF GENERAL PRACTITIONERS
41 Cadogan Gardens, London, S.W.3

Associateship

Any registered (or provisionally registered) medical practitioner is eligible for admission as an associate, provided he gives an undertaking that if he enters or remains in general practice he will continue approved postgraduate study and will uphold and promote the aims of the College to the best of his ability.

(A provisionally registered medical practitioner shall cease to be an associate if he fails to obtain registration within two years of qualification.)

Membership

The Council of the College admits to membership, after consultation with the Board of Censors, registered medical practitioners who have been qualified for not less than seven years and have been engaged in general practice for not less than five years or, as an associate, for three years.

An applicant for membership must:— (1) Be proposed and seconded by two members of the College—not being in partnership with each other. (2) Submit evidence concerning his practice, experience, and academic and administrative achievements. (3) Submit himself to an interview with the board of censors, if required. (4) Give an undertaking that he will continue approved postgraduate study while he remains in active general practice, and that he will uphold and promote the aims of the College to the best of his ability. The Council may seek supporting evidence of his eligibility from his sponsors, the board of the faculty in whose area he resides, and, if so required, from others whom he or his sponsors may choose to appoint.

Entrance Fees and Subscriptions

Associates make an annual subscription of £2 2s. 0d. but pay no entrance fee. Members are required to pay an entrance fee on admission of £10 10s. 0d. and make an annual subscription of £5 5s. 0d.

Forms of application for admission to associateship and membership may be obtained from The Secretary, The College of General Practitioners, 41 Cadogan Gardens, London, S.W.3. Tel. No. Sloane 8333.
